Why On Top Therapy?

Volition is the driving point for the therapists at On Top Therapy. The child's motivation to perform relies on the genuine care demonstrated by the therapists and the positive atmosphere the clinic provides. The clinic is equipped with spinning swings, slide, playhouse, trampoline, and much more for motivating children to progress to age-appropriate function. On Top Therapy offers occupational, speech, and coming soon, physical therapy for children of all diagnoses.

Integrating OT With Other Services

The most effective solution to addressing deficits in a child is to request an OT referral along with PT or ST. You can also request all 3 disciplines to simplify the referral process to ensure that no stone is unturned when providing the best treatment for your clients. The majority of children who experience speech delays are also experiencing sensory processing concerns. Allowing OT to assist ST can increase the child's ability to progress by first promoting regulation with OT, then allowing speech to perform pragmatic intervention while the child is regulated.

In addition, the majority of children who toe walk are affected by impaired vestibular input and proprioception which is another form of sensory processing. Allowing OT to initiate a sensory diet to regulate the child will increase the progress and success of PT services.

On Top Therapy accepts all Florida Medicaid, private pay, and most commercial insurances. Allow us to be an extension of care for your child at On Top Therapy!
